

Grandstream Networks, Inc.

WP856 - SAP ERP Demo App Guide

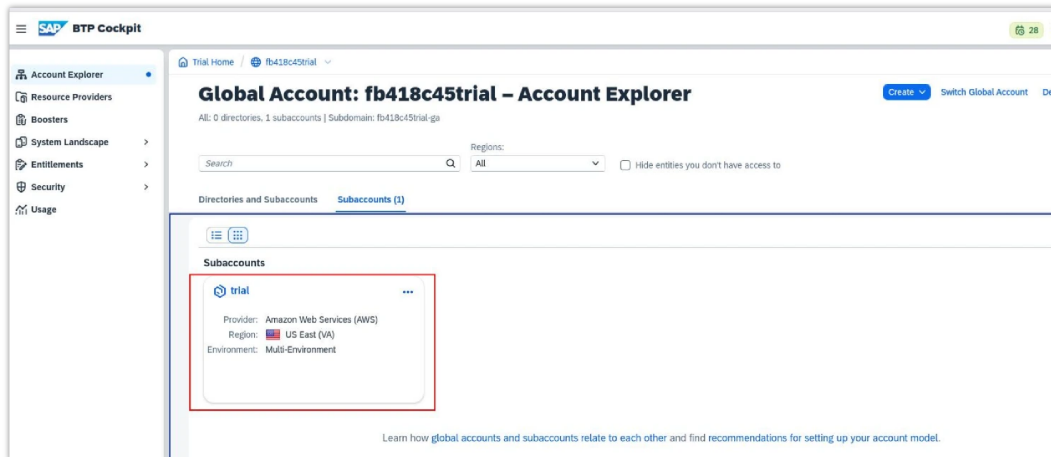

This guide explains how to use the prebuilt SAP Demo app with the SAP test server environment managed by **saptest@grandstream.cn**.

Ensure the Server is Running

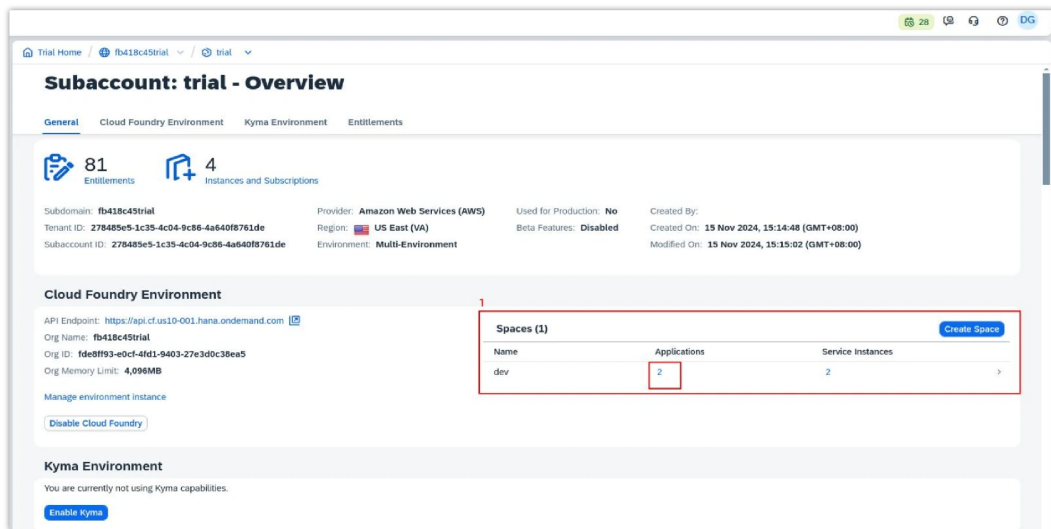

Before proceeding, verify that the **account status** and **backend services** are active.

1. Log in to [SAP Cockpit](#).
2. Log in using the account **saptest@grandstream.cn** (you can obtain the password from **saptest@grandstream.cn**).
3. Navigate to **Sub-accounts** and enter the **Trial Home** page.

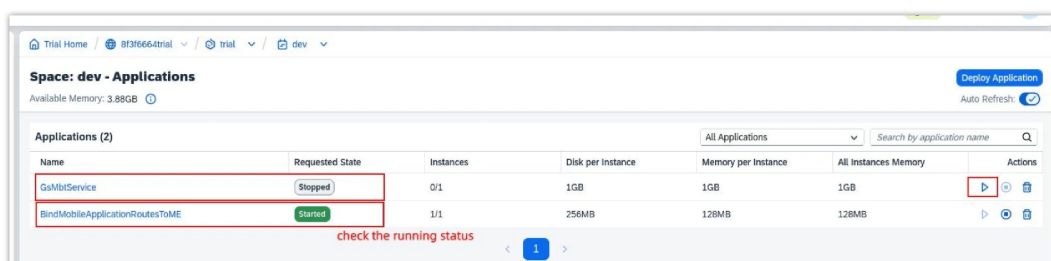

SAP BTP Cockpit – Trial Home

4. Find out the running application instance at the Trial Home page as shown below:

Trial Home – Subaccount

5. Ensure the following two services have a status of **Started**. If either service is not running, click the **Start** icon to activate it.

Services Status

Install the SAP Demo Application

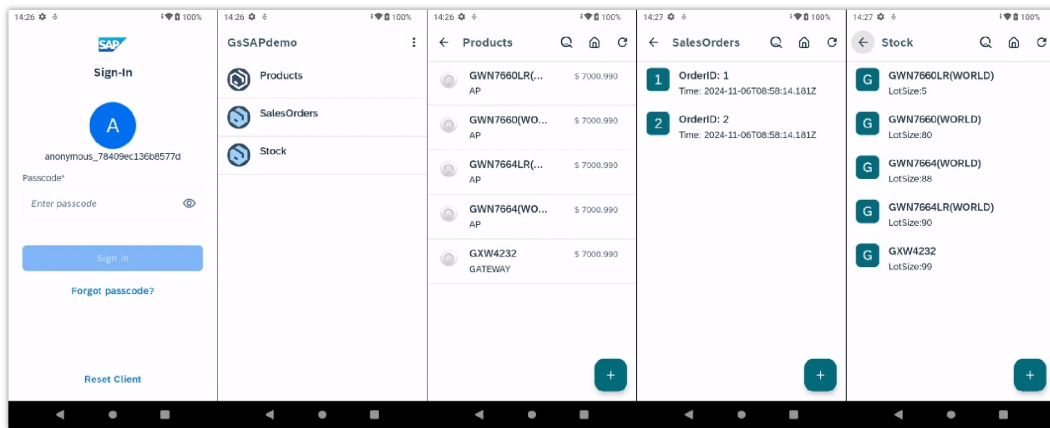

Download and Install GsSAPdemo.apk

1. Download the **GsSAPdemo.apk** file through this [link](#).
2. Install the application using either of the following methods:
 - **TF Card**: Copy the APK file to a TF card and install it manually.
 - **ADB Command**: Run the following command in your terminal:

```
adb install GsSAPdemo.apk
```

Launch the Application

1. Once the installation is complete, open the **GsSAPdemo** app via the **Launcher** on the **WP856** device.
2. During the first launch, you may need to set up a **PIN**.
3. After setup, you will have access to the **main screen** with SAP services.
